

## About

---

I'm a web developer with 4 years of experience creating user-friendly, responsive, and scalable web applications.

Currently focused on improving web performance and implementing best practices for accessibility and SEO.

## Skills

---

**Programming Languages:** Javascript, HTML, CSS

**Frameworks:** React.js, Nest.js, Next.js

## Projects

---

### Admin Portal

Jan 2023 – present

A web-based admin application for managing user accounts, permissions, and analytics.

- Designed and implemented a role-based access control system to enhance security and flexibility.
- Integrated a real-time dashboard for monitoring user activity and system performance.
- Optimized the application for scalability, supporting 50k+ active users with minimal downtime.
- Deployed using a microservices architecture with CI/CD pipelines for seamless updates.
- Open-sourced key components of the project, receiving 1,500+ stars [on GitHub](#).

## Personal Tech Endeavours

---

**Blog:** Actively maintaining my technical blog <https://johndoe.dev>

## Education

---

**Bachelor of Technology (B.Tech)** Indian Institute of Technology, Delhi, Computer Science and Engineering

New Delhi, India  
July 2018 – June 2022

- Specialized in web development and human-computer interaction.
- Completed a final-year project on "Optimizing Web Application Performance Using Progressive Web Apps."
- Led a team to win the university hackathon with a real-time collaboration tool for developers.
